Jordan Majane | Software Engineer

Email: Jordan.Majane@Outlook.com LinkedIn: linkedin.com/in/jordan-majane/ GitHub: github.com/Jmajane

SKILLS & TECHNOLOGY

Languages: JavaScript, Python, HTML, CSS *UX/UI*: Wireframing

Libraries/Frameworks: Bootstrap, Sass, jQuery, React.js, Django, Redux, Node.js, Express.js, Mongoose

Tools/Technologies: MongoDB, PostgreSQL, Git, RESTful APIs, Heroku, AWS

SOFTWARE ENGINEERING EXPERIENCE

Front-End Developer | Tylmen Tech Levi Hackathon | October 2022

- Participated in Levi's Denim Decoded Hackathon as a Front-End Developer for Tylmen.
- Developed widget displaying Tylmen's app allowing users to get correctly measured.
- Collaborated with small team including data scientist, UX/UI Designer, Backend Engineer and Front-End Engineer to develop widget concept to MVP within 10-day sprint.
- Worked in conjunction with Front-End developer with individual and pair coding settings.

Contacted Software Developer | The Spot Occupational Therapy LLC | July 2022

- Engineered an interactive business website to enable and optimize communication between business clients and the company using full stack tooling including JavaScript, React, HTML, and CSS.
- Developed a website for ease of use for families. Providing information on services provided by the physical therapist for children with special needs.
- Best practices of using clean/readable code with correct use of keywords.

Software Engineering Projects

Card Game War – Developed with JavaScript, HTML, and CSS (Bootstrap). **Repo**

- Overcoming challenges to properly have a deck shuffled and dealing both players equal cards.
- Successful utilization of functions being called/used multiple times.

StreamDream - Team project backend based using EJS, JavaScript, HTML, and CSS. **Repo**

- Understanding the challenges of working with a team to effectively work in the same repo without merge conflicts.
- Effectively connected MongoDB to allow users to add artists, information and music videos

Disney Characters – Engineered with user created Disney RESTful API with React/JavaScript, CSS (Bootstrap), HTML and deployed through Netlify. **Repo**

- Understanding how to access data delivered through an API and mapping the information.
- Adding pagination to the API call to display 50 characters over 150 pages.

Noms – Established with Python/Django, HTML, CSS (Bulma), jQuery, PostgreSQL and deployed with Heroku. **Repo**

- Profile is immediately created upon user creation with static data due to issues with viewing profile. Viewing profile uses ID, when profile ID and user ID could have been different before this approach.

Quality Control Inspector — *Wood Group Pratt & Whitney Bloomfield, CT | Feb 2021 – Feb 2022*

- Effectively communicate with team members on best practices to ensure the product is repaired.
- Proper troubleshooting techniques to correct / discover the underlying issue to ensure fast turnaround.

Air Traffic Control Navigational Aids Technician — *United States Marine Corps | June 2015 – Dec 2020*

- Tested faulty equipment to diagnose malfunctions using test equipment or software and applied knowledge of functional operations of electronics units and system valuing over 15 million dollars.

EDUCATION & CERTIFICATIONS

General Assembly Software Engineering Immersive Certificate — *General Assembly* – June 2022

Embry-Riddle Part 65 Certificate — *Embry-Riddle Aeronautical University* - November 2020

Air Traffic Control Navigational Aids Technician — *United States Marine Corps* - June 2016

Associates in Science Business Administration — *Springfield Technical Community College* - May 2012
